## **User-Centered Machine Learning**

WEDNESDAY AND FRIDAY 2-3.15PM CT HYBRID SYNCHRONOUS CS568 SPRING 2023 UIUC

## **OVERVIEW**

Introduces guidelines, processes, and systems for designing effective user experiences powered by machine learning models. Topics include design tradeoffs unique to data-driven products and services such as automation versus control, precision versus recall, and personalization versus privacy. Readings from human computer-interaction, product design, cognitive science, machine learning, computer vision, and natural language processing frame in-class design exercises. Students work in teams on a multi-week research project creating or auditing data-driven experiences.

This semester, we will be using the following technologies to facilitate the hybrid format:

- 👝 Zoom for online instruction
- Slack for all written class communications
- Mural for collaborative design exercises

Follow the links in this doc to sign up for the course's workspaces.
